## JOB POSTING REQUEST FORM

stay up-to-date on new technological developments. We expect you to bring your enthusiasm, love and passion of software development to the team, and on top of those we look for the following:

- Extremely strong understanding of **software engineering principles**: algorithms, data structures, OOP principles, testable code, clean code
- 4+ years of application development experience, with **JavaScript frameworks** (e.g. **Vue, Angular, React** ), **HTML5, CSS**, Frontend development tools (e.g. **TypeScript**, Webpack, Grunt/Gulp, LESS/SASS) and the implementation of mobile-first responsive applications
- Great understanding of microservices, API-first approach, cloud-native development, and headless architecture
- Experience in consuming REST/GraphQL APIs
- Experience with version control systems (Git)
- Experience in cross-browser development and pixel-perfect implementation
- In-depth understanding of the entire web development process; design, development, and deployment
- Knowledge of SEO principles
- Very good command of professional English.

### What would set you apart

- Especially for more senior candidates, a strong grasp of software development and project management life cycle (including Scrum) principles is a big plus. This includes but is not limited to being able to support activities such as gathering requirements, creating user stories, defining scope, effort

## JOB POSTING REQUEST FORM

estimations, team structure creation and creation of project proposals

- Experience in cross-functional agile teams, working with UI/UX designers, backend developers, product owners and test automation engineers
- Experience in working with multinational teams with diverse backgrounds scattered across the globe
- Experience in the eCommerce domain and/or eCommerce frameworks is a plus.

### What you will be doing

- Using your skills to create modular, reusable and perfect-pixel building blocks for optimized customer experience
- Researching, designing and proposing solutions for functionalities
- Being accountable for the optimization, performance, quality, and responsiveness of websites
- Gather requirements, discuss with stakeholders (local or remote), analyze, design and implement technical solutions
- Work with other parts of the organization and support project planning activities
- Mentor, guide and monitor team members with lesser experience
- Perform code reviews
- Create formal and informal documentation.

### Your work life as a software developer at Witty

A software engineer working in our teams takes initiatives in the software development topics of the services that we deliver to our clients, including grooming, estimation, design, development, testing, deployment, optimization, and monitoring.

## JOB POSTING REQUEST FORM

As an end-to-end service consultancy, we use a diverse set of technologies in our stack of mobile, web frontend, and backend spaces which are frequently updated, so our tech stack is exceptionally wide, modern, and more than often cutting edge.

You would be switching teams from time to time including both small and large teams. Smallest teams are self-contained task forces focusing on a single software aspect and are extremely agile. Larger teams are often scattered around the world in multiple time zones, and work on multidimensional projects concentrated on a diverse set of technologies, including mobile apps, multiple web frontends, web backends, API managers, public cloud services, CRM, CMS, ERP, and many other services.
