

## WASTE CHARACTERIZATION

### Spring 2018

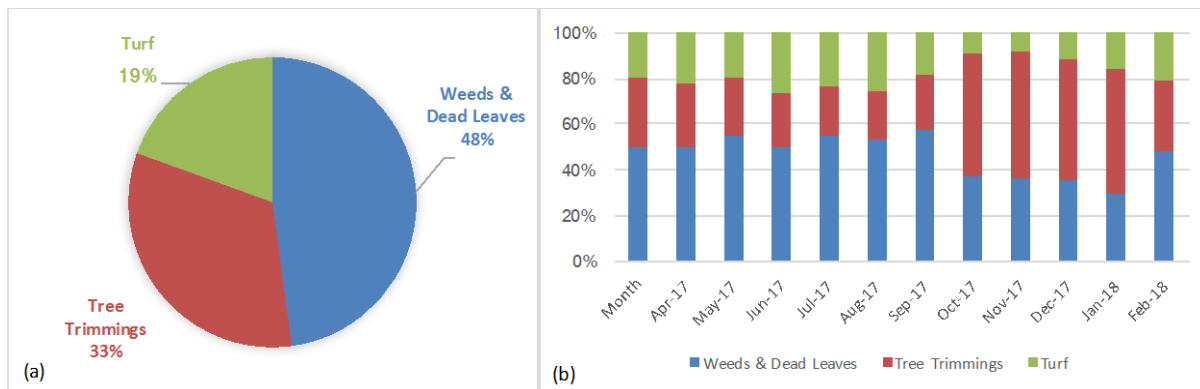

The characterization of the “general waste” was performed, at the sorting point, by three groups of students and the quantity of recovered material was monitored over three weeks. Similarly, the composition of the generated landscaping waste was determined by the landscaping department. Also, the generation of plastic bottles and aluminum cans was monitored, by the catering services, over four weeks.

#### RESULTS:

**Average composition of campus general waste\***

\* sample size = 55 kg

**NDU landscaping waste: (a) average composition; (b) montly composition**

#### Daily generaion of bottles and cans (spring season)

Plastic bottles	1135 bottle per day
Aluminum cans	183 can per day
Glass bottles	44 bottle per day
